B1 or wherein the more than two different types of visually distinct warning light signals are produced simultaneously, said light emitting diodes receiving power from a power source.

Please cancel claims 44 and 45.

Please replace claim 46 with the following rewritten claim:

B2 2 46. (Amended) The combination of claim 43 wherein the more than two different types of visually distinct warning light signals are produced in at least one combination.

Please replace claim 48 with the following rewritten claim:

B3 4 48. (Amended) The combination of claim 43, the at least one controller constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other, whereby at least two different visually distinct warning light signals are illuminated on the visible exterior surface of at least one of the plurality of light supports at any moment.

Please replace claim 51 with the following rewritten claim:

B4 7 51. (Amended) The combination of claim 48, the at least one controller further constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other, whereby different visually distinct warning light signals are simultaneously illuminated on at least two of the first visible exterior surfaces at any moment.

Please replace claim 53 with the following rewritten claim:

B5 9 53. (Amended) The combination of claim 51, the at least one controller further constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other whereby different visually distinct warning light signals are simultaneously illuminated on at least two of the first visible exterior surfaces at any moment.

Please replace claim 67 with the following rewritten claim:

21 67. (Amended) The combination of claim 56, each of the first visible exterior surfaces comprising at least one sector, the controller providing each of the at least one sectors with at least one visually distinct warning light signal.

Please cancel claim 57.

Please cancel claim 60.

Please insert the following new claims 70-84.

24 70. (New) A combination multiple warning signal light system and motorized vehicle, the warning light signal system comprising:

- a) a plurality of light supports engaged to the vehicle, each of the plurality of light supports having a first visible exterior surface;
- b) one or more light emitting diodes disposed about and attached to the first visible exterior surface of each of the plurality of light supports; and
- c) at least one controller in electric communication with the light emitting diodes, the controller constructed and arranged to activate the light emitting diodes thereby producing more than two different types of visually distinct warning light signals, wherein the more than two different types of visually distinct warning light signals are produced in at least one combination, said light emitting diodes receiving power from a power source.

25 71. (New) The combination of claim 70, the at least one controller constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces with a predetermined common warning light signal.

26 72. (New) The combination of claim 70, the at least one controller constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other, whereby at least two different visually distinct warning light signals are illuminated on the first visible exterior surface of at least one of the plurality of light supports at any moment.

- 27 73. (New) The combination of claim 70, each of the light supports further comprising a second visible exterior surface having a plurality of light emitting diodes arranged about and attached to the second visible exterior surface. ²⁴
- 28 74. (New) The combination of claim 70, the at least one controller further constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces with a common warning light signal for illumination of at least two of the first visible exterior surfaces at any moment. ²⁴
- 29 75. (New) The combination of claim 70, the at least one controller further constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other, whereby different visually distinct warning light signals are simultaneously illuminated on at least two of the first visible exterior surfaces at any moment. ²⁴
- 30 76. (New) The combination of claim 70, the at least one controller further constructed and arranged to independently control the light emitting diodes on the first visible exterior surfaces and the second visible exterior surfaces thereby providing at least one visually distinct warning light signal to each of the first visible exterior surfaces and to the second visible exterior surfaces. ²⁴
- 31 77. (New) The combination of claim 70, the at least one controller further constructed and arranged to activate the light emitting diodes on each of the first visible exterior surfaces independently of each other, whereby different visually distinct warning light signals are simultaneously illuminated on at least two of the first visible exterior surfaces at any moment. ²⁴
- 32 78. (New) The combination of claim 70, wherein at least one of the warning light signals is a directional indicator. ²⁴
- 33 79. (New) The combination of claim 70, wherein the motorized vehicle is a utility vehicle. ²⁴
- 34 80. (New) The combination of claim 70, wherein the motorized vehicle is an emergency vehicle. ²⁴
- 35 81. (New) The combination of claim 70, further comprising at least one light support frame, at least one of the plurality of light supports being attached to the light support frame. ²⁴
- 36 82. (New) The combination of claim 70, wherein the warning light signals warn and direct
